■ REAL WORLD EXCEL TASK SHEETS — INTERMEDIATE LEVEL

10 Practical Sheets · Real Business Scenarios · Between Basic and Advanced

Every formula explained with WHY — not just WHAT to type

#	Sheet Title	Real-Life Use	Key Formulas
1	Monthly Expense Tracker	Personal finance, home budgeting	SUMIF, ROUND, IF, COUNTIF
2	Student Fee Collection Register	Schools, tuition centres, colleges	VLOOKUP, IF, TODAY, DATEDIF, COUNTIF
3	Product Price List with Discounts	Shops, distributors, sales teams	IF, ROUND, MAX, MIN, nested IF
4	Attendance & Leave Tracker	HR dept, managers, team leads	COUNTIF, NETWORKDAYS, IF, COUNTA
5	Customer Order Tracker	E-commerce, retail, distributors	SUMIF, IF, TODAY, VLOOKUP, IFERROR
6	Monthly Sales Commission Sheet	Sales teams, insurance agents, MLM	IF, SUMIF, ROUND, nested IF, MAX
7	Rent & Utility Bill Tracker	Landlords, PG owners, societies	SUMIF, IF, DATEDIF, EDATE, TODAY
8	Project Task & Deadline Tracker	Managers, freelancers, students	TODAY, IF, NETWORKDAYS, COUNTIF, DATEDIF
9	Medical Store Inventory & Expiry	Pharmacy, medical shop, hospital	TODAY, IF, DATEDIF, VLOOKUP, SUMIF
10	Monthly P&L; for Small Shop	Shop owners, small business, CA	SUM, SUMIF, IF, ROUND, net profit

How to use: Open Excel → Create a new workbook → One sheet per task. Type the headers and sample data exactly as shown. ✍ marks where you write a formula. Read the full explanation before writing — understand WHY first, then type the formula.

■ Monthly Expense Tracker

Used by: I

■ What Is This & Who Uses It?

Every person who wants to manage their money needs an expense tracker. You write down every expense — groceries, rent, phone bill, eating out, transport — and the sheet automatically shows you: how much you spent in each category, which category exceeded budget, and how much is left for the rest of the month. This is also the most common sheet taught in Excel courses because it uses formulas that appear in almost every business sheet too.

■ Create These Columns (Sheet: June Expenses)

Date	Description	Category	Amount ■	Payment Mode	Receipt?	Monthly Budget ■	Status ✍
01-Jun	Rent	Housing	8000	Bank Transfer	Yes	8000	
02-Jun	Grocery - BigBazaar	Food & Groceries	2340	UPI	Yes	8000	
03-Jun	Petrol	Transport	800	Cash	No	3000	
05-Jun	Swiggy order	Food & Groceries	480	UPI	No	8000	
07-Jun	Phone bill	Utilities	299	Auto-debit	Yes	1500	
10-Jun	Movie tickets	Entertainment	600	UPI	No	2000	
12-Jun	Grocery - Local	Food & Groceries	1800	Cash	No	8000	
15-Jun	Electricity bill	Utilities	1200	Bank	Yes	1500	
18-Jun	Gym membership	Health	1500	Card	Yes	2000	
20-Jun	Restaurant dinner	Food & Groceries	1850	UPI	No	8000	
22-Jun	Auto/cab rides	Transport	650	UPI	No	3000	
25-Jun	Medicine	Health	380	Cash	No	2000	
28-Jun	Clothing	Shopping	2200	Card	Yes	3000	
30-Jun	Internet bill	Utilities	799	Auto-debit	Yes	1500	

■ Formulas to Write

FORMULA 1 — Status column H: Is this category over budget?

```
=IF(SUMIF($C$2:$C$15, C2, $D$2:$D$15) > G2, "■ Over Budget", "■ Under Budget")
```

SUMIF adds all expenses in the same category. Then IF checks: did total spending in that category exceed the monthly budget? If yes → red flag. For Utilities: 299+1200+799 = ■2,298 vs budget ■1,500 → Over Budget! Copy this formula down all rows.

FORMULA 2 — Category-wise summary table (create below your data in row 18+)

```
=SUMIF($C$2:$C$15, "Food & Groceries", $D$2:$D$15) → Total food spending
=COUNTIF($C$2:$C$15, "Transport") → How many transport expenses this month
=ROUND(SUM($D$2:$D$15), 0) → Total monthly spend
=G2 - SUMIF($C$2:$C$15, C2, $D$2:$D$15) → Remaining budget in each category
```

■ *REAL WORLD: Food spending = 2340+480+1800+1850 = ■6,470 vs ■8,000 budget → Under budget ■. Utilities = ■2,298 vs ■1,500 → Over by ■798 ■. This instant category analysis is why Excel budgeting is more powerful than notebook budgeting!*

FORMULA 3 — UPI vs Cash vs Card spending split

```
=SUMIF($E$2:$E$15, "UPI", $D$2:$D$15) → Total spent via UPI
=SUMIF($E$2:$E$15, "Cash", $D$2:$D$15) → Total cash spent
```

This tells you your payment mode mix. High cash = harder to track. High UPI = easier audit trail for tax purposes.

■ Student Fee Collection Register

Used by: S

■ What Is This & Who Uses It?

Every school, tuition centre, or coaching institute collects fees from students monthly or quarterly. The accounts department needs to track: which students have paid, which are overdue, how many days overdue, and what is the total collected vs outstanding. This sheet uses VLOOKUP to automatically pull student details, TODAY() to calculate overdue days, and IF to flag defaulters. Thousands of schools use exactly this structure.

■ Part A: Student Master List (separate area or sheet)

Student ID	Student Name	Class	Guardian Name	Phone	Monthly Fee ■
S001	Aarav Mehta	10A	Ramesh Mehta	9876543210	2500
S002	Priya Sharma	9B	Sunita Sharma	9876543211	2500
S003	Rajan Verma	10A	Mohan Verma	9876543212	2500
S004	Nisha Gupta	9B	Vijay Gupta	9876543213	2000
S005	Arjun Kumar	8C	Anil Kumar	9876543214	2000
S006	Divya Nair	10A	Reena Nair	9876543215	2500

■ Part B: June 2025 Fee Collection Register

Student ID	Name ✍	Class ✍	Fee Due ■ ✍	Payment Date	Amount Paid ■	Balance ■ ✍	Days Overdue ✍	Status ✍
S001				05-Jun-2025	2500			
S002				12-Jun-2025	2500			
S003				-	0			
S004				08-Jun-2025	1000			
S005				-	0			
S006				03-Jun-2025	2500			

■ Formulas to Write

FORMULA 1 — Auto-fill Name using VLOOKUP

```
=VLOOKUP(A2, $H$2:$M$7, 2, 0) [H2:M7 = your Master List range]
```

VLOOKUP looks up Student ID (A2) in the Master List and returns the Name (2nd column). 0 = exact match. This auto-fills Name, Class, Fee Due without typing — change the column number to 3 for Class, 6 for Fee. Now if you add/update the Master List, all Collection sheets update automatically.

FORMULA 2 — Balance Due

```
=D2 - F2 [Fee Due - Amount Paid]
```

S004 paid only ■1,000 vs ■2,000 fee → Balance = ■1,000. S003 paid nothing → Balance = ■2,500. Simple subtraction but pulls from VLOOKUP-filled fee amount — so no manual entry needed.

FORMULA 3 — Days Overdue (due date = 5th of month)

```
=IF(G2>0, IF(E2="-", TODAY()-DATE(2025,6,5), MAX(0,E2-DATE(2025,6,5))), 0)
```

If Balance > 0 AND no payment date → days since 5th June (due date). If paid but still has balance → calculate from payment date. If fully paid → 0 days overdue. This formula handles all three scenarios.

FORMULA 4 — Status flag

```
=IF(G2=0, "■ Paid", IF(H2>30, "■ Overdue >30 days", IF(H2>0, "■ Overdue", "■ Paid")))
```

■ REAL WORLD: Schools send SMS/WhatsApp to ■ students first. COUNTIF(I:I,"■") counts defaulters. SUMIF(I:I,"■*",G:G) totals outstanding from serious defaulters. This is how school accountants build their monthly collection report for the principal.*

■■ Product Price List with Discounts

Used by: S

■ What Is This & Who Uses It?

Every shop, distributor, or manufacturer needs a price list that automatically calculates selling price after applying discounts for different customer types. A distributor may give 10% to retailers, 15% to wholesalers, and 20% to bulk buyers. This price list uses nested IF formulas to apply the right discount based on customer type and order quantity — eliminating manual calculation errors on every invoice.

■ Create These Columns (Sheet: Price List)

e	Product Name	Category	MRP ■	Cost Price ■	Customer Type	Order Qty	Discount % ✍	Selling Price ✍	Margin ■ ✍	Ma
	USB-C Cable 1m	Cables	199	80	Retailer	50				
	Wall Charger 20W	Chargers	499	180	Wholesaler	200				
	Mobile Cover 6.5"	Accessories	299	75	Bulk Buyer	500				
	Screen Protector	Accessories	149	40	Retailer	30				
	Wireless Earbuds	Audio	999	350	Wholesaler	100				
	Phone Stand	Accessories	249	70	Walk-in	1				
	Car Mount	Accessories	349	95	Bulk Buyer	250				
	Screen Cleaner Kit	Accessories	99	30	Retailer	80				

■ Formulas to Write

FORMULA 1 — Discount % based on Customer Type AND Quantity

```
=IF(F2="Walk-in", 0, IF(F2="Retailer", IF(G2>=50, 12, 8), IF(F2="Wholesaler", IF(G2>=100, 18, 14), IF(G2>=300, 22, 18))))
```

Walk-in: 0% (full MRP). Retailer: 8% standard, 12% if qty ≥ 50. Wholesaler: 14% standard, 18% if qty ≥ 100. Bulk Buyer: 18% standard, 22% if qty ≥ 300. This nested IF applies 4 customer types and 2 quantity tiers each. Copy down all rows.

FORMULA 2 — Selling Price

```
=ROUND(D2 * (1 - H2/100), 2)
```

Selling Price = MRP × (1 – Discount%). ROUND to 2 decimals removes paise fractions. P001 (USB Cable, Retailer, 50 qty): 199 × (1–0.12) = ■175.12.

FORMULA 3 — Margin per unit and Margin %

```
Margin ■: =I2 - E2 [Selling Price - Cost Price]
```

```
Margin %: =ROUND((I2 - E2) / I2 * 100, 1)
```

Margin % tells you profitability per item. A product with 60% margin is much more valuable than one with 20% margin — even if selling price is lower. Focus sales effort on high-margin items.

■ *Add a MIN SELLING PRICE column: =ROUND(E2*1.15,0) which is cost + 15% minimum margin. Then add a flag column: if Selling Price is below Min Selling Price, show a warning. This prevents accidental below-cost selling during price negotiations!*

■ Attendance & Leave Tracker

Used by: H

■ What Is This & Who Uses It?

Every company needs to track employee attendance. HR uses it to calculate salary deductions for absent days, monitor leave balances, and flag employees who are frequently absent. This sheet marks P (Present), A (Absent), L (Leave), H (Holiday) for each employee for each day of the month. COUNTIF then counts each type, and formulas calculate salary deductions. This is exactly what payroll software does — built transparently in Excel.

■ Create This Structure (Sheet: June Attendance)

Emp ID	Name	1	2	3	4	5	6	7	...	30	Days P ✍	Days A ✍	Leaves ✍	Holidays ✍	Working Days ✍	Deduction ■ ✍
E001	Ravi Kumar	P	P	P	P	H	P	P	...	P						
E002	Priya Singh	P	A	P	P	H	P	L	...	P						
E003	Aman Verma	P	P	P	A	H	A	P	...	L						
E004	Sunita Rao	P	P	P	P	H	P	P	...	P						
E005	Rohit Sharma	L	L	P	P	H	P	P	...	P						

→ Columns C onwards: Enter P/A/L/H for each day of June (1 to 30). H = Holiday (Sundays + public holidays)

■ Formulas to Write

FORMULA 1 — Count Present days

```
=COUNTIF(C2:AF2, "P") [AF = column for day 30]
```

Counts how many 'P' entries in the row. Ravi → 26 Present days. This is the base for salary calculation.

FORMULA 2 — Count Absent, Leave, Holiday separately

```
Days Absent: =COUNTIF(C2:AF2, "A")
```

```
Leaves Taken: =COUNTIF(C2:AF2, "L")
```

```
Holidays: =COUNTIF(C2:AF2, "H")
```

FORMULA 3 — Total working days in the month (excluding holidays)

```
=NETWORKDAYS("01-Jun-2025", "30-Jun-2025") - 0 [adjust for public holidays]
```

OR simply: =N2+K2+M2 (Present + Absent + Leave = working days assigned). June 2025 has 21 working days excluding Sundays.

FORMULA 4 — Salary Deduction for absent days

```
=ROUND((Monthly_Salary / Working_Days) * Days_Absent, 0)
```

If Aman (■14,480/month) is absent 2 days out of 21 working days: Deduction = (14,480/21) × 2 = ■1,379. This per-day salary deduction formula is used by every payroll system.

■ *REAL WORLD: HR then passes Deduction amounts to the Salary Register (Sheet 1 of Real Life Excel sheets). Attendance feeds Payroll. Payroll feeds P&L.; Everything is connected — this is the accounting cycle in Excel!*

■ Customer Order Tracker

Used by: E

■ What Is This & Who Uses It?

Any business that takes orders from multiple customers and delivers over time needs an Order Tracker. It shows: order date, expected delivery, actual delivery, status, and outstanding payment. Sales teams check this daily. Operations teams use it for dispatch planning. Finance uses it to identify overdue payments. This single sheet replaces multiple WhatsApp messages and manual follow-ups.

■ Create These Columns (Sheet: Order Tracker)

	Order Date	Items Ordered	Order Value ■	Expected Delivery	Actual Delivery	Delivery Status ✍	Days Delayed ✍	Payment Received	Balanc ✍
es	01-Jun-25	Mobile Covers ×25	5000	10-Jun-25	09-Jun-25			5000	
ibutor	03-Jun-25	USB Cables ×50	7000	15-Jun-25	18-Jun-25			7000	
ad	05-Jun-25	Chargers ×30	8970	12-Jun-25	-			0	
s	10-Jun-25	Screen Protectors ×100	11800	20-Jun-25	20-Jun-25			5000	
etail	15-Jun-25	Earbuds ×10	8990	25-Jun-25	-			0	
il	20-Jun-25	Mixed order	3540	28-Jun-25	27-Jun-25			3540	

■ Formulas to Write

FORMULA 1 — Delivery Status

```
=IF(G2="-", IF(TODAY()>F2, "■ Overdue", "■ Pending"), IF(G2<=F2, "■ On Time", "■■ Late"))
```

If Actual Delivery = '-' (not yet delivered): Is today past expected? → Overdue. Else → Pending. If delivered: Was it on or before expected date? → On Time. After? → Late. ORD-002 delivered 18th vs expected 15th → Late. ORD-001 delivered 9th vs expected 10th → On Time.

FORMULA 2 — Days Delayed

```
=IFERROR(IF(G2="-", MAX(0,TODAY()-F2), MAX(0,DATEVALUE(G2)-DATEVALUE(F2))), 0)
```

If not delivered: days past expected (if today > expected). If delivered: days after expected date. IFERROR handles any date conversion issues. MAX(0,...) prevents negative (early delivery shows 0 delay).

FORMULA 3 — Balance Payment

```
=E2 - J2 [Order Value - Payment Received]
```

FORMULA 4 — Payment Status

```
=IF(K2=0, "■ Fully Paid", IF(K2=E2, "■ Unpaid", "■ Partial – ■"&K2;&" due"))
```

ORD-004: Paid ■5,000 vs ■11,800 → Partial. ORD-003: Paid ■0 → Unpaid. The & symbol joins text and number in the status message — powerful for readable alerts.

■ *DASHBOARD FORMULAS: =COUNTIF(H:H,"■*") → overdue orders count. =SUMIF(L:L,"■*",E:E) → total unpaid order value. =SUMIF(H:H,"■*",E:E) → on-time delivery value. These 3 formulas give you the operations and collections dashboard instantly!*

■ Monthly Sales Commission Sheet

Used by: S

■ What Is This & Who Uses It?

Any business with a sales team needs a commission sheet. Commission is usually tiered — more you sell, higher the % you earn. Insurance companies, real estate firms, FMCG distributors, and any company with incentive-based pay use this. This sheet automates commission calculation so sales reps can see exactly what they'll earn, and finance can process it quickly.

■ Slab Structure (put this in a reference area)

Slab	Sales Target Range ■	Commission %	Bonus if Target Hit
1	0 – 50,000	3%	No bonus
2	50,001 – 1,00,000	5%	■2,000 bonus
3	1,00,001 – 2,00,000	8%	■5,000 bonus
4	Above 2,00,000	12%	■10,000 bonus

■ Create These Columns (Sheet: June Commission)

n	June Sales ■	Target ■	% Achieved ✍	Commission % ✍	Base Commission ■ ✍	Bonus ■ ✍	Total Payout ■ ✍	Last Month ■	Chang
	78500	75000						65000	
	1	15000	1	50000					98000
	45200	75000						55000	
	2	25000	1	50000					1
	88000	75000						72000	

■ Formulas to Write

FORMULA 1 — % of Target Achieved

```
=ROUND(D2/E2*100, 1)
```

Ravi: 78,500 / 75,000 × 100 = 104.7% (exceeded target!). Aman: 45,200/75,000 = 60.3% (under target). This % drives the commission slab.

FORMULA 2 — Commission % based on actual sales (tiered slab)

```
=IF(D2>200000, 12, IF(D2>100000, 8, IF(D2>50000, 5, 3)))
```

Checks which slab the sales figure falls into and returns the right commission %. Ravi (■78,500) → 5%. Priya (■1,15,000) → 8%. Sunita (■2,25,000) → 12%.

FORMULA 3 — Base Commission

```
=ROUND(D2 * G2/100, 0)
```

FORMULA 4 — Bonus (only if sales ≥ target)

```
=IF(D2>=E2, IF(D2>200000, 10000, IF(D2>100000, 5000, IF(D2>50000, 2000, 0))), 0)
```

Bonus only given if target is MET (D2 >= E2). Then bonus tier based on sales level. Aman (60.3% of target) → ■0 bonus. Ravi (104.7%) → ■2,000 bonus.

FORMULA 5 — Month-over-month change

```
=IF(D2 > K2, show increase %, else show decrease %)
```

Ravi: June ■78,500 vs May ■65,000 → ■ +20.8%. Shows trend direction with emoji and exact percentage. Powerful motivational tool for sales meetings!

■ Rent & Utility Bill Tracker

Used by: L

■ What Is This & Who Uses It?

A landlord with multiple tenants, a PG owner with 20 rooms, or a housing society manager needs to track: monthly rent, electricity, water, maintenance — who paid, who owes how much, and for how many months. This sheet automatically calculates total dues per tenant, overdue months, and generates a summary for legal notice purposes (needed for eviction cases).

■ Create These Columns (Sheet: Tenant Register)

lame	Lease Start	Monthly Rent ■	Elec ■	Water ■	Maint ■	Total Monthly Due ✍	Amount Paid Jun	Balance Jun ✍	Lease End ✍	Months Remaining
har	01-Jan-2025	12000	800	200	500		12000			
gh	01-Mar-2025	15000	1200	200	500		10000			
rma	01-Jun-2024	10000	600	200	500		11300			
ao	01-Sep-2025	18000	1500	200	500		0			
arma	15-Feb-2025	14000	950	200	500		14000			
atel	01-Apr-2025	13000	700	200	500		6500			

■ Formulas to Write

FORMULA 1 — Total Monthly Due

```
=D2 + E2 + F2 + G2 [Rent + Electricity + Water + Maintenance]
```

Ravi: 12000+800+200+500 = ■13,500. Total due is what appears on the monthly receipt.

FORMULA 2 — Balance for current month

```
=H2 - I2 [Total Due - Amount Paid]
```

Priya paid ■10,000 vs due ■16,900 → Balance ■6,900. Sunita paid ■0 → full balance outstanding.

FORMULA 3 — Lease End Date (assuming 11-month lease from start)

```
=EDATE(C2, 11) [11 months from lease start]
```

EDATE adds exactly 11 months to the lease start date. Ravi (start Jan-25) → lease ends Nov-25. This auto-calculates without counting months manually.

FORMULA 4 — Months Remaining on Lease

```
=MAX(0, DATEDIF(TODAY(), K2, "M"))
```

DATEDIF counts complete months between today and lease end. MAX(0,...) prevents negative if lease is overdue. Expired lease → 0 months → flag for renewal. This tells you which tenants need new lease agreements.

FORMULA 5 — Payment Status

```
=IF(J2=0, "■ Paid", IF(J2=H2, "■ Not Paid", "■ Partial - ■"&J2;&" due"))
```

■ LANDLORD USE: =COUNTIF(M:M,"■") counts non-paying tenants. =SUMIF(M:M,"■*",J:J) totals unpaid rent. For legal notice: =SUMIF(A:A,"104",J:J) shows all months Sunita owes — use over multiple monthly sheets. This is the evidence document for eviction proceedings!*

■ Project Task & Deadline Tracker

Used by: M

■ What Is This & Who Uses It?

Every project — whether a website launch, a construction project, a college submission, or a business audit — has tasks, owners, start dates, deadlines, and completion status. This tracker keeps everything visible in one place. Managers use it for team meetings. Freelancers use it for client reporting. Students use it for project submission tracking. It automatically flags overdue tasks and calculates days remaining.

■ Create These Columns (Sheet: Project Tasks)

me	Assigned To	Priority	Start Date	Deadline	Days Allowed ✍	Status	Completion %	Actual Finish	Days Remaining ✍	Overdue ✍
ment gathering	Ravi	High	01-Jun-25	07-Jun-25		Complete	100	06-Jun-25		
ame design	Priya	High	05-Jun-25	15-Jun-25		Complete	100	14-Jun-25		
development	Aman	High	10-Jun-25	30-Jun-25		In Progress	65	-		
e setup	Sunita	Medium	12-Jun-25	25-Jun-25		Complete	100	28-Jun-25		
& QA	Rohit	High	25-Jun-25	10-Jul-25		Not Started	0	-		
esentation	Kavya	Medium	01-Jul-25	05-Jul-25		Not Started	0	-		
loyment	Aman	High	06-Jul-25	15-Jul-25		Not Started	0	-		

■ Formulas to Write

FORMULA 1 — Days Allowed (total working days for task)

```
=NETWORKDAYS(E2, F2) [working days from start to deadline]
```

NETWORKDAYS counts only working days (Mon–Fri), excluding weekends. T01: 01-Jun to 07-Jun = 5 working days. More realistic than calendar days for project planning.

FORMULA 2 — Days Remaining (for in-progress tasks)

```
=IF(Complete, 0, NETWORKDAYS(TODAY(), Deadline))
```

Complete → 0. Not Started or In Progress → working days from today to deadline. Negative = already past deadline. T03 (deadline 30-Jun, today 30-Jun) → 0 days left — critical!

FORMULA 3 — Overdue flag

```
=IF(Complete, no flag, IF(TODAY() past deadline, OVERDUE, IF(within 2 days, Due Soon, On Track)))
```

Completed tasks → no flag. Today past deadline → Red. Within 2 days of deadline → Yellow. More than 2 days remaining → Green. T04 finished 28-Jun vs 25-Jun deadline → complete but was delayed.

FORMULA 4 — Delay days (for completed tasks)

```
=IF(AND(Status=Complete, Finish date exists), MAX(0, NETWORKDAYS(Deadline, Actual_Finish)-1), 0)
```

T04: finished 28-Jun vs 25-Jun deadline → NETWORKDAYS(25-Jun, 28-Jun)-1 = 2 working days delay. T01: finished 06-Jun vs 07-Jun deadline → 0 delay (early). This delay history helps estimate future task timelines.

■ *REAL WORLD: =COUNTIF(L:L,"■*") shows overdue count for status meetings. =AVERAGEIF(H:H,"Complete",M:M) shows average delay per completed task — your team's historical performance. Project managers present this in weekly reviews!*

■ Medical Store Inventory & Expiry Tracker

Used by: P

■ What Is This & Who Uses It?

Every pharmacy and medical shop must track medicine expiry dates — selling expired medicine is illegal and dangerous. Simultaneously, they need to monitor stock levels and reorder before running out. This sheet flags medicines expiring within 60 days, identifies already-expired stock for return/disposal, and calculates reorder quantities. Drug inspectors can ask for this register during inspections.

■ Create These Columns (Sheet: Medical Inventory)

	Category	Batch No	MFG Date	Expiry Date	Days to Expiry ✍	Expiry Status ✍	Qty in Stock	Min Stock	Reorder Needed ✍	Cost Price ■
0mg	Analgesic	B2401	01-Jan-24	01-Jan-26			500	100		2.5
g	Antibiotic	B2302	01-Mar-23	01-Mar-25			80	50		12
IU	Supplement	B2404	01-Apr-24	01-Oct-25			200	30		25
g	Diabetes	B2312	01-Dec-23	01-Dec-24			45	100		8
	Allergy	B2405	01-May-24	01-May-26			300	80		3
0mg	Antibiotic	B2403	01-Mar-24	01-Sep-25			20	50		45
ng	Gastric	B2406	01-Jun-24	01-Jun-26			150	40		6
	Diabetes	B2310	01-Oct-23	01-Apr-25			10	20		180

Analysis date: 30-Jun-2025 (use TODAY() in your formulas)

■ Formulas to Write

FORMULA 1 — Days to Expiry

```
=DATEDIF(TODAY(), F2, "D") [OR simply: =F2 - TODAY()]
```

Days remaining until expiry date. M004 (Metformin, expires Dec-2024): already expired → negative number. M002 (expires Mar-2025): also expired. Positive = still valid.

FORMULA 2 — Expiry Status (the most important formula)

```
=IF(Days_to_Expiry < 0, EXPIRED, IF(days <=30, Red, IF(days <=60, Yellow, IF(days <=180, Orange, Green))))
```

M004 (–213 days) → ■ EXPIRED. M008 (expired Apr-2025, –90 days) → ■ EXPIRED. M006 (expires Sep-2025, ~60 days) → ■ Watch. M001 (expires Jan-2026, ~180 days) → ■ Good.

FORMULA 3 — Reorder Needed?

```
=IF(Stock < Min_Stock, show ORDER NOW with quantity needed, else Stock OK)
```

If current stock < minimum stock → ORDER NOW and suggest 3× minimum (enough for 3 months). M006: 20 units vs 50 minimum → ORDER NOW - 130 units needed (50×3–20). M004 is expired so ordering is irrelevant.

FORMULA 4 — Stock Value

```
=I2 * L2 [Qty × Cost Price]
```

M001: 500 × ■2.50 = ■1,250. M008: 10 × ■180 = ■1,800 (expensive + expired = serious loss). Total stock value = SUM of this column. Expired stock value must be written off.

FORMULA 5 — Action recommendation

```
=IF(Expired, Return/Dispose, IF(expiring soon, Apply for return, IF(low stock, Reorder, No action)))
```

■ *LEGAL: Drug inspectors check: (1) Expired medicines in stock → heavy fine and license cancellation. (2) Storage conditions of temperature-sensitive medicines. (3) Purchase bills for all medicines. This Excel sheet shows compliance to inspectors and prevents selling expired stock accidentally.*

■ Monthly P&L: for Small Shop

Used by: S

■ What Is This & Who Uses It?

Every small shop owner needs to know at the end of the month: did I make money or lose money? This Profit & Loss sheet (also called Income & Expenditure statement) summarises all income and all expenses to give the Net Profit or Loss for the month. CA firms prepare this for their clients monthly. Shop owners use it to decide whether to stock more or cut costs. Banks require last 3 months P&L; for business loans. This is the most fundamental business financial document.

■ Part A: Income Section (Sheet: Monthly P&L;)

Income Category	Description	April ■	May ■	June ■	Q1 Total ✍	Q1 Avg ✍	Trend ✍
Sales Revenue	Cash + Credit sales of stock	52000	47000	58000			
Sales Returns	Less: Returns inward (deduct)	-2000	-1500	-2360			
Net Sales	Gross Sales - Returns	✍	✍	✍			
Other Income	Interest received, misc	500	400	600			
TOTAL INCOME		✍	✍	✍	✍	✍	

■ Part B: Expenses Section

Expense Category	Description	April ■	May ■	June ■	Q1 Total ✍	Q1 Avg ✍	% of Sales ✍
Cost of Goods Sold	Opening stock + Purchases - Closing stock	28000	26000	30000			
Salaries	Owner + staff wages	18000	18000	18000			
Rent	Shop + godown rent	8000	8000	8000			
Electricity	Electricity + generator	1800	2100	1900			
Transport	Delivery + pickup costs	1200	900	1400			
Marketing	Ads, pamphlets, social media	2000	3000	2500			
Packaging	Bags, boxes, tape	600	550	700			
Repairs & Maintenance	Equipment servicing	0	1500	0			
Miscellaneous	Petty expenses, sundry	800	650	900			
Depreciation	Furniture, fixtures 10% p.a.	1250	1250	1250			
TOTAL EXPENSES		✍	✍	✍	✍	✍	

■ Formulas to Write

FORMULA 1 — Net Sales (after returns)

```
=C3+C4 [Sales Revenue + Sales Returns (negative number)]
```

April: 52,000 + (–2,000) = ■50,000 Net Sales. B4 is already negative so simply adding works. Net Sales is the correct top line for P&L.;

FORMULA 2 — Total Income and Total Expenses

```
Total Income: =C5+C6 [Net Sales + Other Income]
```

```
Total Expenses: =SUM(C8:C18) [sum all expense rows]
```

FORMULA 3 — Q1 Total and Average

```
Q1 Total: =C3+D3+E3 [April+May+June for each row]
```

```
Q1 Avg: =ROUND(F3/3, 0) [Q1 Total / 3 months]
```

FORMULA 4 — Expense as % of Sales (crucial for cost control)

```
=ROUND(F8/F5*100, 1) [Expense Q1 Total / Total Income Q1 × 100]
```

COGS %: 84,000/46,500×100 = 60.7% — this is COGS as % of Sales. Salaries %: 54,000/46,500 = 38.7%. If any expense % is unusually high vs industry benchmark, it needs investigation.

FORMULA 5 — MOST IMPORTANT: Net Profit / Loss

```
April Net Profit: =C7 - C19 [Total Income - Total Expenses]
```

```
=IF(C20>0, "■ Profit: ■"&C20;, "■ Loss: ■"&ABS;(C20))
```

April: Income ■50,500 – Expenses ■61,650 = –■11,150 (Loss). June: Income ■56,600 – Expenses ■64,650 = –■8,050 (improving!). The trend is positive — loss is reducing each month. This is the business story in one number.

FORMULA 6 — Trend arrow (month-on-month profit change)

```
=IF(E20>D20, "■ Improving by ■"&(E20-D20), "■ Worse by ■"&ABS;(E20-D20))
```

■ *REAL WORLD: This exact P&L; structure is what CAs prepare for their small business clients every month. Banks ask for 3 months P&L; before loan approval — this IS that document. Income Tax also uses this for business income declaration. One sheet → loan ready → tax ready → management decision ready!*

■ ALL 10 SHEETS COMPLETE — You now have a complete business Excel toolkit!

Sheet	Key Business Use	Most Important Formula
1 — Expense Tracker	Personal budgeting, cost control	SUMIF by category for over-budget alert
2 — Fee Collection	School accounts, overdue tracking	VLOOKUP + DATEDIF for days overdue
3 — Price List	Sales, invoicing, margin control	Nested IF for tiered discount by customer type
4 — Attendance	HR payroll, leave management	COUNTIF P/A/L + NETWORKDAYS deduction
5 — Order Tracker	Sales follow-up, delivery ops	IF chain for delivery status + balance alert
6 — Commission Sheet	Sales incentives, motivation	Nested IF for tiered commission slabs
7 — Rent Tracker	Landlord management, legal evidence	EDATE for lease end + DATEDIF months remaining
8 — Project Tracker	Deadline management, team accountability	NETWORKDAYS days remaining + overdue flag
9 — Medical Inventory	Pharmacy compliance, expiry control	DATEDIF days to expiry + 5-level status flag
10 — Monthly P&L;	Business health, bank loan ready	SUM income–expenses = Net Profit/Loss with trend
